Everything seems to be working down here? The Tribal lands and the lab location is showing up. Maybe it's the browser cache?

I have been working with Qi this morning on getting it updated. The script takes care of data updates on existing services, but if we add new layers that don't belong in an existing service like the monitoring sites, then the Flex code must be updated as well and we haven't gotten that part automated yet because it takes a few more manual steps. The R6 version is up to date though with the new fire data and the sites <http://r6gis1.r06.epa.gov/Region6EOC/>

Qi is working on the Orator flex code right now, so it should be ready in about 20 minutes according to Qi. The Orator Monitoring site service is up and running; he's just updating the flex part now.

New ASPECT flight paths data/mxd/msd are updated and uploaded to Orator FTP for Torrin to run the script on. He advised me earlier he would run it at 3PM Central. R6 Flex is also up to date now with the new data.

Subject: Re: R6 EOC Flex Viewer v1 code/mxd/msd/data uploaded SW & Orator-S FTP

---

Flex Viewer v1 code/data/mxd/msd is uploaded to sidewinder at the following path:  
/Incidents/LosAlamosFire2011/Region6/RRR/Services/Web\_Services/LosAlamosSFV\_v1

Same folders are uploaded to Orator-S FTP as well at the following path:  
orator-s.epa.gov/Orator-s/LosAlamos\_R6/LosAlamosSFV\_v1

Let me know if there are any problems or questions; hopefully we got the small kinks worked out during the MS River Flood response.

Sure, no problem. If Brett can upload the code, data and maps to the Orator staging server, Qi and I can get it deployed. Will this also need to be password protected in production? I will be out this Thursday and Friday, so please be sure to cc Qi on all communications, he taught me everything I know and is my backup POC on Orator.

Gents-

Attached are the rough flight lines for ASPECT of the Area G and Waste Storage areas. These will be modified and manipulated with more accurate coordinates as the time arrives, but these will suffice to get things started. We can mobilize in Santa Fe by mid-day tomorrow, 29 June (we are calibrating at the Grand Junction pads in the morning). Please let us know what schedule works best for you. Our flight will collect radiation, chemical and if possible imagery. Also, the infrared line scanner will be able to identify the front of the fire. If the situation changes rapidly for the bad while the plane is in the air, we are preparing to process data on the aircraft and ship it directly to the ground for a faster turn around on the situational awareness

Please contact Mark (513-675-4753) if you have any questions or concerns
